

# T1L WEBINAR

APRIL 28, 2026  
VIRTUAL

## The Future of Building Integration Could Be Your Old Wiring

Could your facility become a smart building? T1L Long-Distance Ethernet technology could make it possible to transform your building without expensive, disruptive installation work. In our T1L webinar, learn more about the advantages of syncing building systems.

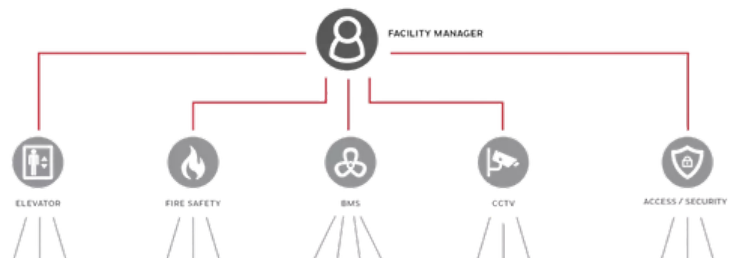

### Introducing T1L Ethernet

10BASE-T1L is a non-proprietary networking standard to enable IP communication between devices up to 1 kilometer long and can transfer data at a speed of 10 Mbps.

### Key Advantages We Will Discuss

- Cable flexibility: reuse current cabling to help lower the cost of transition to IP networks
- Enhanced Cybersecurity of IT Networks by using Operational Technology applications.
- Access to higher ethernet bandwidth to enable your smart buildings

### JUST TWO WIRES
